

Microsoft Teams Integration: Enhanced Collaboration, Streamlined Projects

cora

Overview

Streamline project communication and boost collaboration with Microsoft Teams integration for Cora. Instantly create and link Teams channels to your Cora projects, bringing conversations and updates into one central workspace. Users can even initiate new Cora projects directly from within Teams, making it faster and easier to get projects up and running - all without leaving the tools they use every day.

Business Impact

Enhanced collaboration and communication

Centralize all project-related discussions directly within Teams. Instantly link Cora projects to dedicated Teams channels, facilitating real-time communication whether in-office, remote, or mobile. Ensure everyone stays connected and informed.

Increased efficiency and automation

Streamline your approval processes and reduce delays, even when approvers are on-the-go. Approvals and notifications occur seamlessly within Teams channels, minimizing clicks, accelerating workflows, and ensuring efficient project setup and execution.

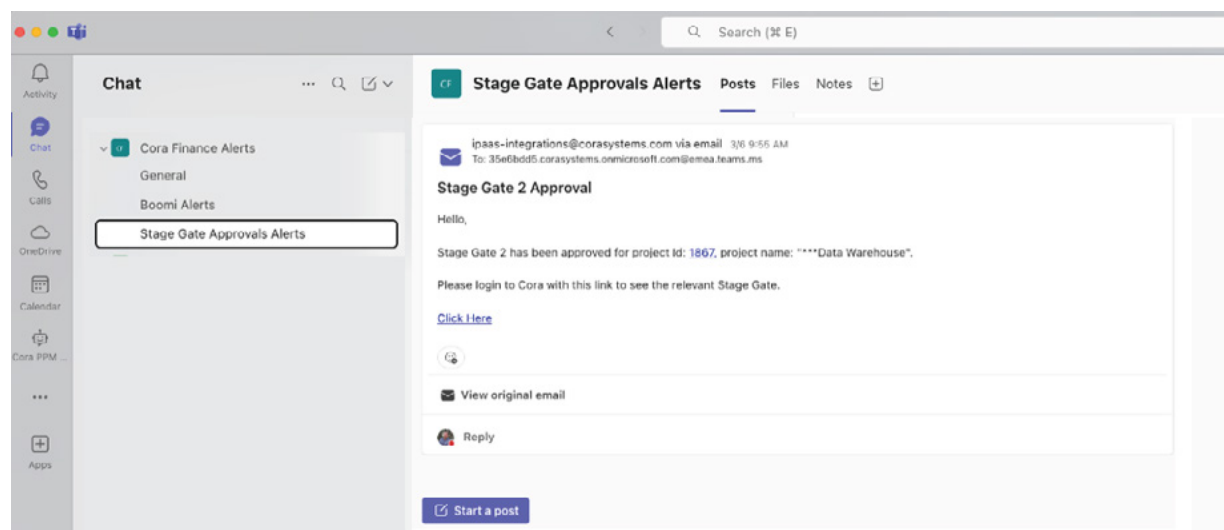

Improved user experience and adoption

Empower users by integrating directly into the familiar Teams environment. Minimize the learning curve, enable rapid onboarding, and deliver a frictionless, intuitive user experience—no advanced training required.

Use Cases

- Real-time Project Discussions
- Centralized Communication Channel
- Accelerated Project Onboarding
- In-Teams Approvals
- In-Teams Notifications

Bring collaboration and decisions to where your users work every day.

Integration Capabilities

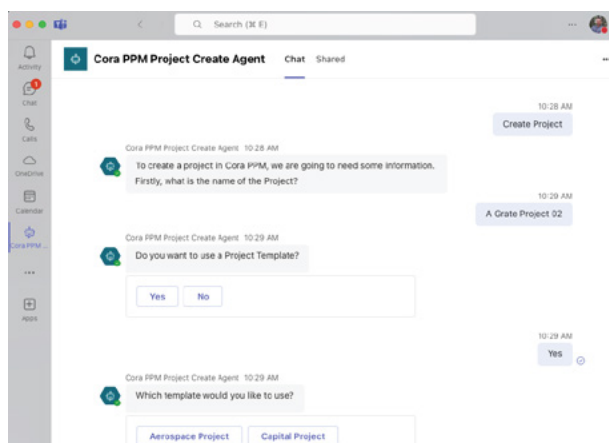

The Cora extension includes two-way integration with a growing set of capabilities. All user interactions are streamlined to save time and improve productivity.

Use Cases	Description
Teams Channel Creation	Automatically create and link Teams channels directly from Cora.
Create a Cora Project	Create a new project in Cora via Teams chat, using Cora templates and controls.
In-Teams Approvals	Approve workflows directly in Teams without switching platforms.

Implementation and Support

Deploying the Microsoft Teams Integration is fast and straightforward. Our team provides guided setup, configuration support, and enablement resources to ensure a smooth rollout tailored to your environment. Users can begin collaborating within Teams immediately - no technical complexity required.

Cora also offers ongoing support and best practice guidance, with new capabilities and use cases planned to expand the value of the integration over time.

Stakeholder Benefits

- PMO – Simplify project communication and improve governance
- Project Managers - Accelerate project delivery and streamline workflows
- Team Members - Easy collaboration in a familiar environment with reduced learning curve
- Approvers - Efficient use of time with simple, streamlined notifications and approvals
- CTO/CIO - Leverage existing technology stack in a secure and controlled way
