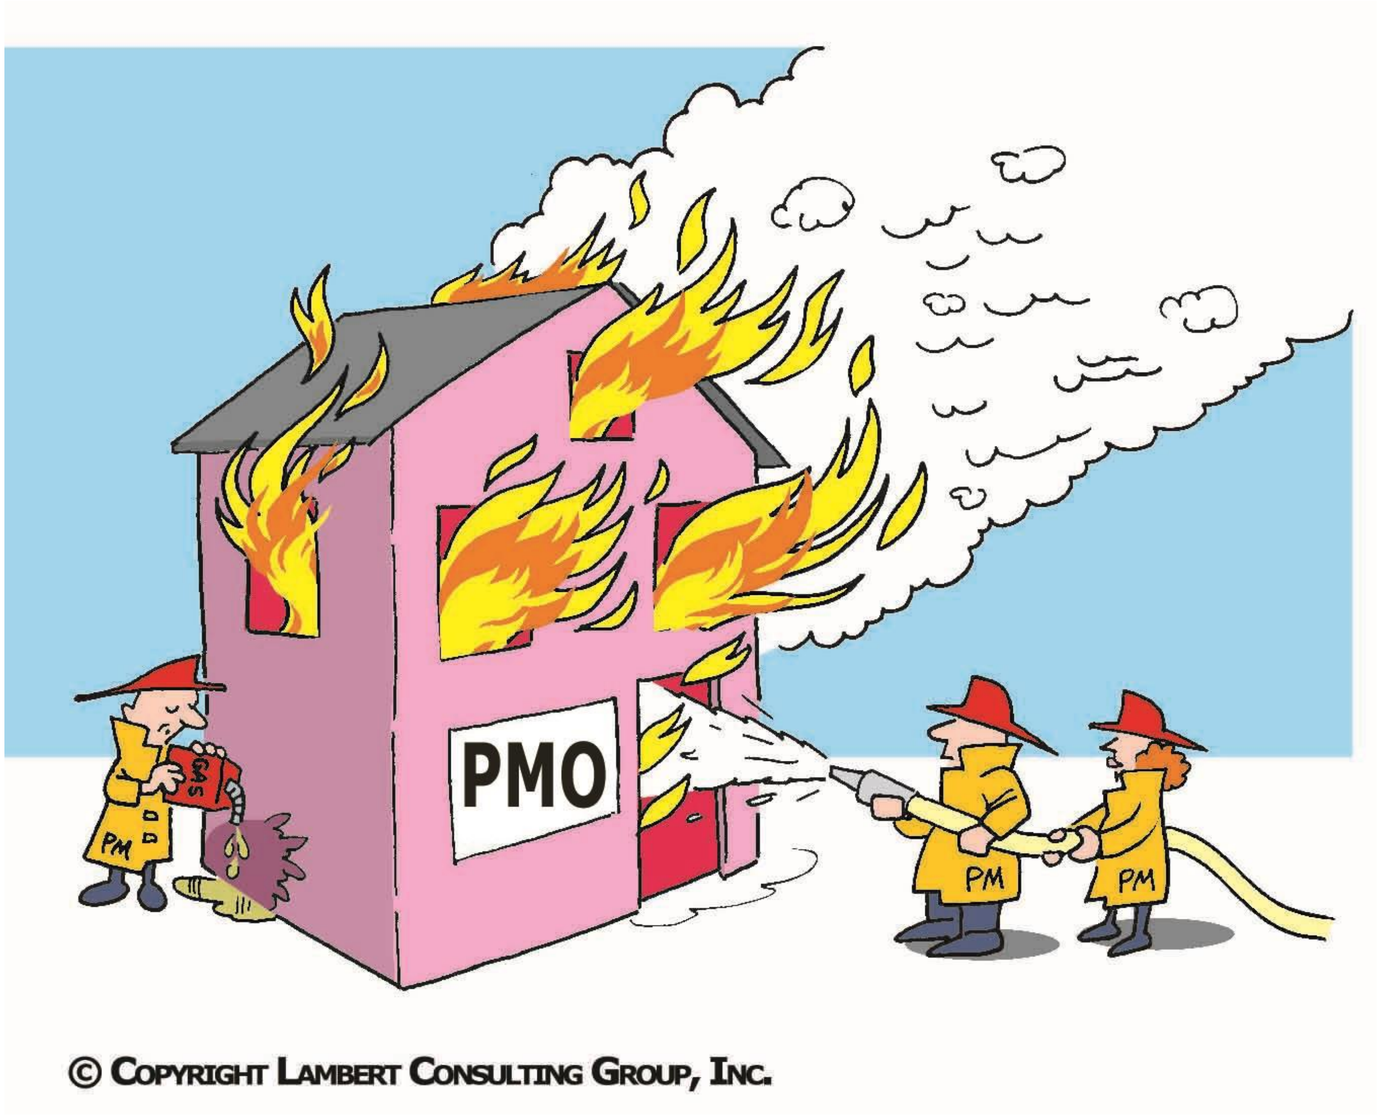
Resource Management



Resource Management

In Summary

- You MUST recognize the difference between data and information
- Automation can lead to making bad decisions "faster"
- Proper structuring of data processing leads to creation of vital decision support information
- Data can be integrated vertically (WBS) or horizontally (OBS)
- “On call" information is readily available
- Predicting the future based on the past avoids surprises
- Easily design a "dashboard" that meets your needs
- Allows you to take control of your project information
