

# Cora + Boomi iPaaS Connectivity

Intelligently Connects Your Applications and Automates Your Workflows

Turn IT complexity into connectivity by connecting Cora to Boomi's iPaaS middleware. Enhance your program insights using Boomi's low-code connectors to break down data silos by integrating on-premises and cloud applications, data sources and devices across your distributed environment. Get integrated in Cora faster. Benefit from the power of rapid integration across your digital ecosystem by tapping into a library of enterprise-level connectors.

- ⦿ Greater connectivity to your project ecosystem
- ⦿ Easily pull data into your Cora platform
- ⦿ Intelligent project automation
- ⦿ Easy integration with your IT applications

## What is iPaaS?

Integration platform as a service (iPaaS) is an industry-standard protocol. It acts like a set of automated tools that integrate the software applications in your IT ecosystem. The benefit of an iPaaS platform is that it provides pre-built connectors and business rules, that easily facilitate the integration of applications.

## Steps to faster deployment

### 1. Build

Quickly select your desired datasets in Boomi's vast library of application and technology integrators along with pre-built starter processes.

### 2. Deploy

Deploy integrations to Cora in the most appropriate location for you – behind the firewall or in a private or public cloud.

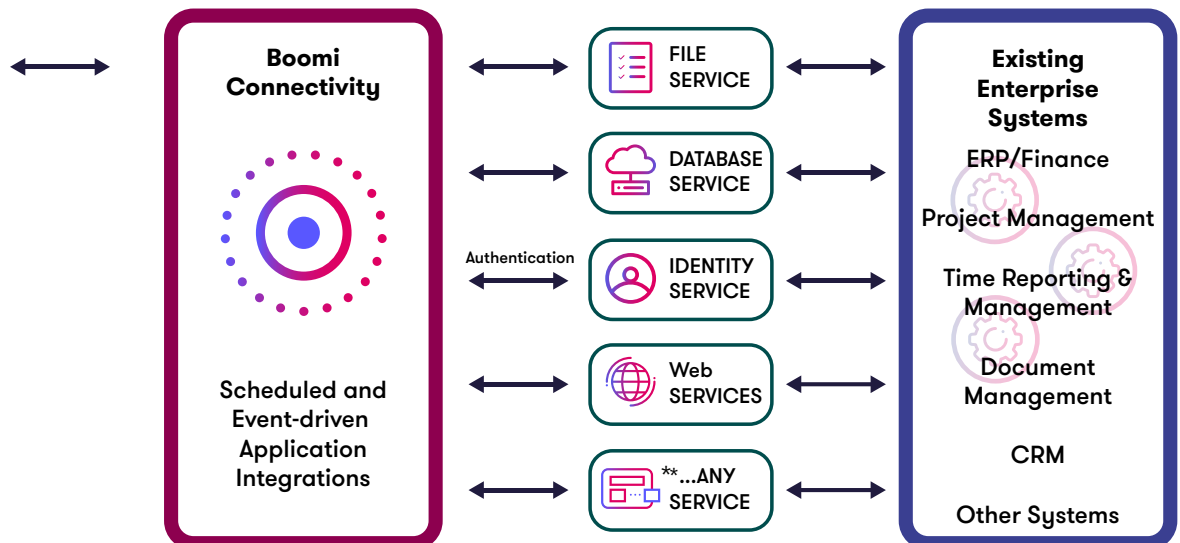

### 3. Manage

Centrally manage Boomi with a cloud-hosted dashboard for a thorough view and reporting on status and process details.

## CORA

## CUSTOMER

\* "...any service": varies depending on what service is capable of.

**Figure 1:** We've partnered with Boomi, a world-leading provider in this space, to enable your iPaaS Connectivity. Build your integrations into Cora with a catalog of Boomi connectors.

## Features

### 1. Greater connectivity to your project ecosystem

The beauty of iPaaS Connectivity is that it's empowering. Using iPaaS, your Cora platform can access over 160 connectors (from SAGE to Salesforce to SAP, from Jira and Microsoft Dynamics to Oracle and Workday). As you realise the benefit of one, you might have other unconnected systems in your wider project ecosystem that you want to harness. Chances are iPaaS will have a connector for it. Even if not, once your system has an API (application programming interface) then we can get you talking with iPaaS. Open doors and get the two systems talking. Connection is fast-tracked.

### 2. Easily pull data into your Cora platform

After technical configuration of your iPaaS Connectivity, you can easily bring information from your systems into your Cora platform, from, say, your financial management system (e.g. actual budget, committed spend etc.) or your HR system (e.g. user names, types of skills & qualifications, assigning staff etc.) or your sales system (e.g. CRM data, capturing of business cases, Gantt charts, risks & issues etc.) or data from a services project that you need visibility on, to front-load and back-load the work coming in – so you can run projects on that data, analyze progress, assess potential projects coming down the line, spec them out, and so on. All flowing naturally. The iPaaS solution also gives a consolidated view of all integrations: dashboards to present higher-level overviews; and process reporting showing the results of each execution. Integrations with Cora can be either event-driven or scheduled.

### 3. Intelligent project automation

Events that happen in your Cora platform automatically trigger workflows in your internal ecosystem. If, for example, a financial milestone has been hit, there's a billing sequence that needs to happen. Once the milestone is complete on Cora that data is sent out from Cora via your iPaaS connector to your financial system to say: "Here's all the milestones and their details, projects & tasks associated with these milestones, and their value. Now you can start the billing cycle." This immediately triggers a list of activities, fast-tracking your cash flow. Benefit from this intelligent project automation and slash your invoicing days.

### 4. Easy integration with your IT applications

With the library of iPaaS connectors, we'll enable you to join your Cora platform to a range of standard software systems. These include, for example, sales tools, document management systems, requirements management systems, financial management systems and your collaboration tools, amongst others. iPaaS connectors allow you to continue using the applications your users know and love but at the same time integrate those into your Cora platform.

## Benefits

- ⦿ Low-code platform increases efficiency and reduces errors with unique capabilities such as intelligent integration mapping and configuration, and error testing and resolution
- ⦿ Integrate everything in your digital ecosystem, even on-premises, so you minimize disruption, reduce risk, and get more done
- ⦿ Get rid of integration challenges, so you can accelerate new business models and deliver digital products
- ⦿ Do away with excessive capital costs and the complexities of maintaining infrastructure and software on-premises.
- ⦿ Eliminate data and application silos in the cloud and on-premises
- ⦿ Rapid, low-code set-up, configurable within a matter of hours
